

## NEW PRODUCT ANNOUNCEMENT

Jamesway Farm Equipment introduces a 40HP electric FLOATING PUMP, based on the highly successful Jamesway family of vertical electric pumps. This high output pump features the same 20" diameter impeller used on the Jamesway Flush Pump, and may be used to directly flush the floors in large dairies, or can recharge a flush system holding tower. Designed to operate with minimal maintenance, the lower bearing is located above the manure level and an oil reservoir maintains constant lubrication in the bearing chamber. An on-board hoist tilts the pump for easy service and the high quality floatation deck provides a stable platform for the pump.

Contact Jamesway Farm Equipment or you local Jamesway Dealer for more information.
